

## CLINICAL PROJECT MANAGER

Nanologica uses a unique knowledge in the field of materials sciences to fulfill the vision of providing better and cheaper medicine through nanoporous silica. Two business areas within life science, where the knowledge is applied, has formed – Drug Delivery and Chromatography.

Within Drug Delivery, a proprietary technology to deliver the right dose of pharmaceutical drugs to the right place at the optimal time has been developed. The technical platform has been evaluated in several collaborations with big pharma companies and a pipeline of projects where reformulation of existing drugs will address limited therapeutic options for patients has been built, with a focus on the benefits for the patient. Several strategic partnerships have been entered into and we continue to evaluate business opportunities to accelerate innovation and implementation of our technology into clinical stage products.

The technical platform has now taken the step into a first commercial license agreement, at the same time as an in-house project within the field of gastroenterology, with formulation development and preparation of the clinical phase, has started.

We now seek a Clinical Project Manager with an entrepreneurial spirit, hands-on attitude and strong interpersonal skills to join our enthusiastic team, for driving the clinical development of our own product as well as co-development programs. The role will encompass managing multiple development projects, building and maintaining relationships, providing guidance on clinical/regulatory issues and exploring new application areas and business opportunities. At the site in Södertälje we offer a multi-cultural, fast-paced working environment and the opportunities within the company are vast, as we are continuously growing and developing. Welcome to join our journey!

Position Clinical Project Manager

Reporting to CEO

### Responsibilities and Duties

**Project Management** Manage all activities related to projects in clinical development phase in compliance with GCP/ICH guidelines and relevant SOPs, including budget, documentation, reporting and communication with involved parties.

**Business Development** Identify unmet medical needs and challenges of current treatment options to match with potential benefits of the Drug Delivery technology. Support activities for establishing innovation strategies, identifying partners and opportunities and advancing technology or product development. Investigate and prioritize projects according to clinical benefits, match with technology, feasibility and market value. Lead multi-disciplinary internal/external project team activities.

### Qualifications

**Requirements** BS/BA degree or equivalent in life sciences. Advanced degree preferred. 3+ years of industry experience, preferably in clinical project management. Understanding of drug product development and multi-project planning and coordination. Strong understanding of ICH/GCP guidelines and relevant regulatory requirements.

**Desirable** Experience in nanotechnology, drug delivery and/or materials science and in managing of vendors and CROs. Experience in product development according the 505(b)2 regulatory approval pathway in the US. Project management skills and excellent written and verbal communication skills.
